1. From recent study of old project records, including reports from the detailed contact reports forwarded several years ago. It is possible to establish with reasonable certainty that the source of all [ ] and [ ] was probably volcanic in character. First activity is dated AD 1000 ([ ]) or thereabouts, and occurs in Malibay. Although also possible, the same material is believed to originate from Quaternary Pliocene, and probably to [ ] as well.

2. Of greater immediate importance is the new discovery that ALEXANDER'S source and the actual originator of this material is Mr. LEONARD WILDER, [ ] of Salisbury, a prolific and unreliable informant. Additional information which has been learned at one time or another to almost every person connected to [ ] [ ] as well as to the FBI. WILDER, on the basis of a house-to-house canvass, very soon has come closest to HILL independently of ALEXANDER. However, the information he has, [ ] [ ] is definitely receiving WILDER reports identified to those furnished by ALEXANDER through [ ] [ ] , and on two recent occasions HILL has received these reports to HILL through [ ] [ ] . WILDER material has also been furnished by HILL through at least five stations of Bureau (known to him) [ ] [ ] [ ] [ ] [ ] and [ ] [ ] as a result of disclosure of this information. Headquarters is no longer disseminating material from [ ] [ ] (or any other supplier) which appears to originate with WILDER.

3. It was possible to pinpoint WULLER as the author of [ ] material through study of the raw reports forwarded in 207-670 of 16 August 1960 and in subsequent transmittals. He had not been this raw product in any quantity before. All the reports were obviously written by the same person. Despite larding of factual data, much of this raw material was disturbingly indicative of a papermill mentality (see Attachment A for a prime example) and was carefully examined for a clue to the writer's identity. We located one report (Attachment B) in which the writer named two out of three Austrian participants at a meeting in Belgium and indicated that he, himself, was the third. Since this meeting was an offshoot affair to a Brussels congress of the anti-Communist "Union des Résistants Pour une Europe Libre" (UREL), it was possible to obtain from UREL a list of all participants, including the three Austrians. VCE was the third man. The accumulated data in his 201 was sufficient to clinch the identification. A minor but interesting point of additional confirmation is the superimposed notation "Quelles France" which appears on each report in one batch received by DEBRAY from [ ]. This notation was probably made by ANTHONY. WULLER has long been known to use the alias system KARWATH.

4. Although WULLER's name has not previously been mentioned, Vienna Station has considerably more information on him than does Paris. Most of the [ ]

Significant additional Headquarters traces are as follows:

b) BEAIE report, 5 January 1950. FULLER worked for BEAIE until 1948 when he switched to OSOPAL, Salzburg. Was a narcotics charge but release was arranged after

CLASSIFICATION

for "SIGAK intelligence. He told his USAGC contact he was in direct contact with UPHILL and had received binding promises from placement of his presumed collaborators. Claimed strong private intelligence organization specializing in collecting Communist information. USAGC rated him as falling within the category of "competent and/or enemy personnel . . . contacted from time to time either for furnishing opinions or verifying or establishing intelligence information."

- b) MOLA-1586, 23 March 1950. Includes above, plus notation VOLLER in contact with SMITH.
- c) MOLA-2498, 5 July 1950. As of June 1950, UPHILL referred to VOLLER's statement of contact and stated that VOLLER was not, nor ever had been a part of UPHILL operations.
- d) MOLA-3988, 9 November 1950. A reorganization of USAGC agent numbering system indicated that VOLLER was an active part of USAGC operations. He had number TT-5.
- e) Two CORDAL reports, both dated April 1951, confirmed that VOLLER was working for OSOPAL, Salzburg, on Project GRAND RAPIDS.
- f) MOLA-13306, 10 December 1951, included VOLLER on a list of informants dropped by various COMINT intelligence agencies in Germany and Austria. VOLLER, then living at Salzburg, Josefstrasse 16, was dropped for ineptitude.
- g) OFPA-50718 of 19 February 1960. [ ] reported that [ ] had given him a briefing on VOLLER (apparently at his request). According to it was stated that SMITH had said it had been VOLLER until 1955, and that he made false statements and dropped him.

6. As you can judge from the traces, there are many gaps in our knowledge of VOLLER. In August 1958 he was living at Josefstrasse 16, Salzburg, which may or may not be his present address. Most KGBR traces him as an individual (probably freelance), but he obviously works at least part-time as a guide/escort for Soviet and satellite tourist groups visiting the Salzburg area. [ ] has reported this; it is also confirmed by the content of RUMBLEY and reports. We do not know under whose auspices VOLLER does this work. He may be an employee of a Salzburg travel bureau or possibly the Salzburg representative of a Vienna agency such as the Reisebüro Josefstadt Union, as we know, makes arrangements in Austria for satellite tour groups. In any case, VOLLER apparently has free time to spend in Vienna as well as Salzburg and to attend meetings of URPK and similar groups in other parts of Europe. [ ] is that the FIR people have become so used to seeing him as a hanger-on that they talk freely in his presence and even regard him as a little "wacky". No explanation can be found anywhere for VOLLER's claimed close association with FIR officials, yet such access is implied or stated in almost all of VOLLER's first-person reporting. He is particularly fond of reporting alleged close identification "military expert" of the KK of the KGB.

7. VOLLER's known or reasonably established reporting channels and contacts are charted in Attachment C. There is no doubt in our minds that VOLLER and RUMBLEY had a close and continuing relationship, and reporting relationship under the aliases FESTIVAL and RUMBLEY. VOLLER ( [ ]) of Düsseldorf, previously mentioned as a participant in KGBR spy RUMBLEY's affairs, secretary-general of the URPK German section, and an intelligence peddler in his own right. [ ] has been known to work for UPHILL for his material. RUMBLEY has reportedly been known to pass VOLLER material on FIR and other Communist and Cominform activities to [ ]. The latter has been known to work for UPHILL as well as to LARVIT. Some of the same VOLLER material has been passed to UPHILL through [ ] the Luxembourg organization, and RUMBLEY through [ ] the Luxembourg organization. The chart to RUMBLEY on the chart is a subject matter.

C 7 and a LIBRARY affiliated Italian organization

The charted relationship between WOLLER and AMERIK in Salzburg clearly exists, but we have no details other than the indication that WOLLER is "an AMERIK", The WOLLER material which AMERIK is now passing to [ ] is different in scope and style from that which has passed to us over the last few years or more and it thus appears fairly certain that WOLLER has been a very source of AMERIK (and thus of GRIMMEL) for at least the past decade. This relationship could account for WOLLER's exaggerated boast to KREBS in 1958 that he (WOLLER) was a GRIMMEL official charged with penetrating the KGB and the front groups.

9. Full Headquarters traces on Johann ANHELM were forwarded to Vienna in  
SAW-11663 of 11 July 1958 in connection with the [ ] case. In regard to  
memory, three show that ANHELM, a veteran ~~UNIVERSITY~~ officer, a former ~~UNIVERSITY~~  
agent [ ] recruited him) and OSOPAL informant, has been compromised  
peaked over the years as an SPILL source or sub-source. [ ] [ ] [ ]  
and [ ] have all put him in this category. [ ] [ ] additional notes:  
years ago that he received all of his reports on EPIC matters from ANHELM.  
In fact, for several months in 1956 [ ] paid a small monthly sum out of  
OSOPAL funds to ANHELM for this EPIC material. ANHELM has been described  
as hard-working, with a nose for intelligence matters, and a man who would do  
anything for a fast buckling. His ~~WORLD~~-originated reports given to [ ]  
are only carbon copies of the originals which go to ~~UNIVERSITY~~, Vienna.

10. It would be of interest to determine how much of the considerable VON VOLLMER material which Vienna Station receives from [ ] is also passed to the Station by GRENZGUARD-10. We are fairly sure there is some duplication (although this is hard to establish here without access to the raw material from both sides) but consider it likely that GRENZGUARD Headquarters, which is aware of VOLLMER's background and almost certainly knows that he is ALIBIING's sub-source, treats the material with caution and generally disseminates to VIENNA only selected items which for the most part have been rewritten or combined with other material. [ ] recently having received from GRENZGUARD. In the period 1956-59 a number of reports which were remarkably similar to material which we now know originated with VOLLMER. Like those passed to [ ], these reports concerned FBI and miscellaneous other and native of the FRGs. As noted in DIA-21683 of 6 February 1959, GRENZGUARD, when short the source of these reports, did not identify him by name but provided a description which could very well apply to VOLLMER in the light of our knowledge.

11. From a reports standpoint, the decision at Headquarters to reject for evaluation all material traceable to WILMER seems that about 70% of previous unusable [ ] "production" must now be considered worthless as intelligence to KEMARK. The remaining random items of GRENADA origin which [ ] provides are of very marginal interest since, in the view of a Headquarters staff evaluation made last year, they . . . "appear to be collections of fragmentary pieces of information, do not indicate the type or ultimate source, the dates of individual sightings, nor are they capable of analytical interpolations kept separate from hard fact."

12. We doubt that much can be done to raise the quality of [ ] ing. [ ] in the past has never responded satisfactorily to USMACM's operational guidance in this matter; despite scoldings and lectures he has picked up what he could lay his hands on, good or bad, and turned it over without sources data or evaluation. The situation for many years was not his own fault. Except for ANGELER, he controlled no sources of his own and little or no direct influence on GRASSCAMP operations. Perhaps this has now changed with [ ]'s reported rise to new and broader responsibilities, presumably in the operational field. If so, we would recommend that he be required to list and describe all principal GRASSCAMP sources in the AFR (so they can be traced by us) and to identify the source of all reports by him to USMACM. We see no objection to cladding [ ] recent material in gets from ANGELER, pointing to Attachment A as an example and revealing that we know nothing of the original information. In this connection, without being specific, we have been provided with some information

... mutual if you also required [ ] to turn in a detailed report.  
WELLER which will fill in the gaps in his record.

1. It is our hope that the virtual elimination of this project's PERTIM  
values to KEMARK will stimulate Station reassessment of the project in terms  
of the operational goals discussed in MSG-14600 of 24 August 1961. This  
could appear to depend on the scope of [ ] new responsibilities,  
the possibilities for close field supervision which could improve his per-  
formance and make it responsive to KEMARK objectives. We look forward to your  
views on this.

1b. For your information, we intend to inform Marsh by separate dispatch  
concerning the most recent WECIL report attributable to WELLER.
